Chief Executive Officer

Inhibikase Therapeutics Announces Second Quarter 2025 Financial Results and Highlights Recent Activity

August 14, 2025 — Inhibikase Therapeutics, Inc. (Nasdaq: IKT) ("Inhibikase" or "Company"), a clinical-stage pharmaceutical company developing therapeutics to modify the course of cardiopulmonary diseases namely, Pulmonary Arterial Hypertension ("PAH"), today reported financial results for the quarter ended June 30, 2025 and highlighted recent developments.

"During our second quarter of 2025, we continued to position the Company to advance IKT-001 toward a late-stage clinical trial in PAH," said Mark Iwicki, Chief Executive Officer of Inhibikase. "We have now finalized our study protocol, and we expect to initiate our Phase 2b clinical study of IKT-001, our re-engineered prodrug of imatinib mesylate, in PAH in the second half of 2025."

Multiple studies including both Phase 2 and the Phase 3 IMPRES study previously demonstrated that imatinib mesylate ("imatinib"), an anti-proliferative tyrosine kinase inhibitor, was highly efficacious in PAH. Notably in the IMPRES study, patients that maintained 400 mg of imatinib for greater than 50% of the treatment period showed a placebo adjusted 45-meter improvement in 6-minute walk distance ("6MWD") which represents best-in-class improvements for patients afflicted by PAH. More recently, a contemporary study in the *American Journal of Respiratory and Critical Care Medicine* demonstrated that higher exposures of imatinib were associated with a larger improvement in total pulmonary resistance ("TPR"). The 400 mg dose of imatinib exhibited the greatest impact on TPR and, even though the majority of patients completed the study at 200 mg or less, the magnitude of the hemodynamic change for the study was noted to compare favorably with recent studies of novel therapies added to background treatment. The Company believes this supports its thesis that IKT-001 has the potential to minimize GI side effects while maximizing the highly efficacious outcomes observed at 400 mg across multiple studies.

Recent Developments:

- Advancement of IKT-001 as a therapy in PAH:
 - During the first half of 2025, the Company evaluated potential study designs and obtained feedback from various key opinion leaders before finalizing a clinical study protocol for its forthcoming Phase 2b study, known as IMPROVE-PAH.
 - IMPROVE-PAH is a multi-center, randomized, double-blind, placebo-controlled study of approximately 150 PAH participants. Participants under IMPROVE-PAH will be randomized 1:1:1 to receive 300 mg IKT-001, 500 mg IKT-001, or placebo once daily for 26 weeks, in addition to stable background PAH therapy. The Company's bioequivalence studies previously confirmed that 500 mg of IKT-001 has comparable exposure in humans to 380 mg of imatinib. The primary efficacy endpoint is change in pulmonary vascular resistance at Week 26. Secondary endpoints include 6MWD, World Health Organization functional class, and pharmacokinetics. The study protocol also includes an interim safety review for study continuance by the Data Safety Monitoring Board with at least 50 patients at 12-weeks of follow-up.
 - The Company expects to initiate IMPROVE-PAH in the second half of 2025.

Financial Results

Cash Position: As of June 30, 2025, cash, cash equivalents and marketable securities were \$87.7 million as compared to \$97.5 million as of December 31, 2024.

Net Loss: Net loss for the quarter ended June 30, 2025, was \$9.9 million, or \$0.11 per share, compared to a net loss of \$5.0 million, or \$0.66 per share in the quarter ended June 30, 2024. Net loss for the six months ended June 30, 2025, was \$23.6 million, or \$0.26 per share, compared to a net loss of \$9.6 million, or \$1.38 per share, for the six months ended June 30, 2024.

R&D Expenses: Research and development expenses were \$5.3 million for the quarter ended June 30, 2025, compared to \$3.1 million for the quarter ended June 30, 2024. Research and development expenses were \$15.8 million for the six months ended June 30, 2025, which includes a non-cash write-off of in-process research and development of \$7.4 million and \$1.0 million of stock-based compensation expense, both associated with the Company's acquisition of CorHepta in February 2025, compared to \$5.8 million for the six months ended June 30, 2024.

SG&A Expenses: Selling, general and administrative expenses for the quarter ended June 30, 2025 were \$5.9 million, compared to \$2.0 million for the quarter ended June 30, 2024. Selling, general and administrative expenses for the six months ended June 30, 2025 were \$11.2 million, which includes \$1.0 million of severance expenses resulting from the transition of senior executives in the Company during the year, compared to \$4.0 million for the six months ended June 30, 2024.

About Inhibikase (www.inhibikase.com)

Inhibikase Therapeutics, Inc. (Nasdaq: IKT) is a clinical-stage pharmaceutical company developing therapeutics to modify the course of cardiopulmonary diseases namely, PAH, that arise from aberrant signaling through the Abelson Tyrosine Kinase, and type III receptor tyrosine kinases including platelet derived growth factor receptors and c-KIT. Our lead product candidate is IKT-001, a prodrug of imatinib mesylate, for PAH which is an orphan indication. PAH is a progressive, life-threatening disease characterized by pulmonary vascular remodeling and elevated pulmonary vascular resistance that affects approximately 50,000 Americans.

Social Media Disclaimer

Investors and others should note that the Company announces material financial information to investors using its investor relations website, press releases, SEC filings and public conference calls and webcasts. The Company intends to also use LinkedIn and YouTube as a means of disclosing information about the Company, its services and other matters and for complying with its disclosure obligations under Regulation FD.

Forward-Looking Statements

This press release contains "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking terminology such as "believes," "expects," "may," "will," "should," "anticipates," "plans," or similar expressions or the negative of these terms and similar expressions are intended to identify forward-looking statements. These forward-looking statements include, but are not limited to, statements that express the Company's intentions, beliefs, expectations, strategies, predictions or any other statements related to the potential effects of IKT-001, the initiation of the Company's Phase 2b trial of IKT-001 in PAH and the Company's future activities, or future events or conditions. These forward-looking statements are based on Inhibikase's current expectations and assumptions. Such statements are subject to certain risks and uncertainties, which could cause Inhibikase's actual results to differ materially from those anticipated by the forward-looking statements. Important factors that could cause actual results to differ materially from those in the forward-looking statements include our ability to commence and execute a Phase 2b trial to evaluate IKT-001 as a treatment for PAH, as well as such other factors that are included in our periodic reports on Form 10-K and Form 10-Q that we file with the U.S. Securities and Exchange Commission. Any forward-looking statement, whether as a result of new information, future developments or otherwise, except as may be required by any applicable securities laws.

Disclaimer

This presentation contains information that may constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995, as amended. Inhibitase Therapeutics, Inc. (the "Company" or "we") intends for the forward-looking statements to be covered by the safe harbor provisions for forward-looking statements in those sections. Generally, we have identified such forward-looking statements by using the words "believe," "expect," "intend," "estimate," "anticipate," "forecast," "forecast," "aim," "should," "will," "may", "continue", "assume", "contemplate", "could", "design", "due", "goal", "hope", "might", "plan", "opportunity", "predict", "possible", "potential", "seek", "strategy", "would" and similar expressions that are predictions or indicate future events and future trends, or the negative of these terms or other comparable terminology. Such statements are subject to a number of assumptions, risks and uncertainties which may cause actual results, performance or achievements to be materially different from those anticipated in these forward-looking statements. You should read statements that contain these words carefully because they discuss future expectations and plans which contain projections of future clinical studies or trials, regulatory approvals, product candidate development, results of operations or financial condition or state other forward-looking information. However, the absence of these words or similar expressions does not mean that a statement is not forward-looking. Forward-looking statements are not historical facts, but instead represent only the Company's beliefs regarding future events, many of which, by their nature, are inherently uncertain and outside of the Company's control. It is possible that the Company's actual results and financial condition may differ, possibly materially, from the anticipated results and financial condition indicated in these forward-looking statements. Management believes that these forwardlooking statements are reasonable as of the time made. However, caution should be taken not to place undue reliance on any such forward-looking statements because such statements speak only as of the date when made. The Company undertakes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as required by law. In addition, forward-looking statements are subject to certain risks and uncertainties that could cause actual results to differ materially from the Company's historical experience and our present expectations or projections. This presentation should be read in conjunction with the Company's filings with the Securities and Exchange Commission, including its annual report on Form 10-K, its quarterly Form 10-Q and any subsequent filings with the SEC (collectively, the "SEC Filings"). Important factors that could cause actual results to differ materially from those in the forward-looking statements are set forth in the Company's SEC filings, including under the caption "Risk Factors".

Certain information contained in this presentation relates to or is based on studies, publications, surveys and other data obtained from third-party sources and our own internal estimates and research. While we believe these third-party studies, publications, surveys and other data to be reliable as of the date of this presentation, we have not independently verified, and make no representation as to the adequacy, fairness, accuracy or completeness of any information obtained from third-party sources. In addition, no independent sources has evaluated the reasonableness or accuracy of our internal estimates or research and no reliance should be made on any information or statements made in this presentation related to or based on such internal estimates and research.

We do not intend our use or display of other entities' names, trade names, trademarks or service marks to imply a relationship with, or endorsement or sponsorship of us by, any other entity.

This presentation shall not constitute an offer to sell or a solicitation of an offer to buy any securities, nor shall there be any sale of such securities in any state or jurisdiction in which such offer, solicitation, or sale would be unlawful prior to registration or qualification under the securities laws of any such state or jurisdiction.

Inhibikase Therapeutics

Experienced Leadership with Deep Expertise in PAH

MARK IWICKI Chief Executive Officer

CHRIS CABELL, MD MHS FACC Head of R&D, Chief Medical Officer

DAVID McINTYRE BEC CPA LLB MBA Chief Financial Officer

Inhibikase and IKT-001: Pulmonary Arterial Hypertension (PAH)

Major unmet need with high mortality, poor QoL and high cost

- PAH is a rare, progressive and life-threatening disease with significant unmet need
- ~30% 5-year mortality⁽¹⁾, reduced quality of life and high economic burden
- \$7.6 Billion market with limited treatments that address the underlying etiology

Imatinib has proven efficacy in Phase 3 in PAH

- Imatinib is an anti-proliferative TKI with potential best-in-class improvements in PVR and 6MWD (45 meters*) based on Phase 3 IMPRES and Phase 2 studies
- Imatinib hit primary efficacy endpoints in IMPRES but was not well tolerated at 400mg

Potential to be the 1st oral anti-proliferative agent

- IKT-001 is a pro-drug engineered to realize the potential of imatinib in PAH
- IKT-001 releases imatinib in the blood with potential to minimize GI side effects maximizing potential to achieve highly efficacious doses

Strong Leadership **Executing Near Term** Development

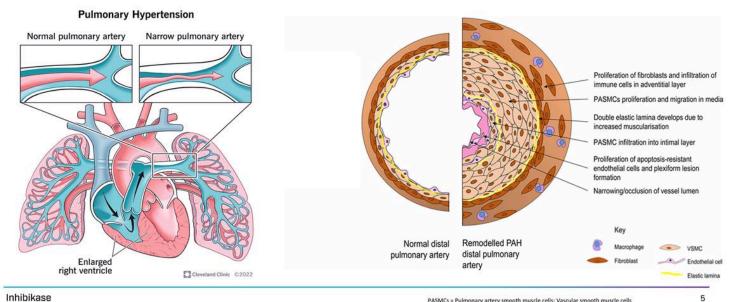

- IKT's Phase 2b is on track to initiate in the second half of 2025
- Long intellectual property runway through 2044
- Team with extensive PAH / CV experience

Inhibikase

(1) Hoeper M, et al. Eur Respir J. 2017
TKI = tyrosine kinase inhibitor; QoL= Quality of Life; PVR = pulmonary vascular resistance; 6MWD = 6-minute walk distance; GI= Gastrointestinal; CV = cardiovascular
* See Page 17

PAH is a Progressive Disease Driven by Uncontrolled Cell Proliferation

Proliferation of vascular cells drive vascular remodeling, raising pulmonary artery pressure and leading to progressive right ventricular heart failure and ultimately death

Inhibikase Therapeutics

PASMCs = Pulmonary artery smooth muscle cells; Vascular smooth muscle cells

PAH: An Orphan Disease with ~30% 5-Year Mortality Despite Aggressive Treatment

~26,000 People with PAH in the US(1) -26,000 People with PAH in the EU5(1) -26,000 People with

High Unmet Medical Need

Progressive and Life Threatening

- ~30% 5-year mortality⁽³⁾ despite aggressive treatment with vasodilator therapies
- · Progressively worsening symptoms

Reduced Quality of Life

- · Chronic breathlessness, and fatigue
- · Significant limitation on activities of daily living
- · Dizziness, chest pain, anxiety and depression

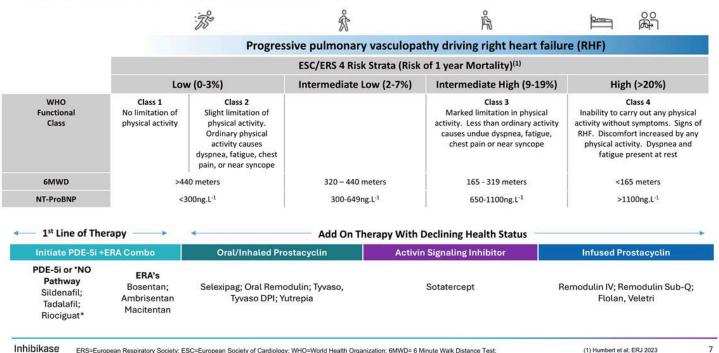

High Economic Burden⁴

- Average monthly healthcare costs ~\$6,850-\$15,650
- Acute all cause hospitalization rate of 700 per 1000 patients per year among Medicare or Medicaid patients
- Substantial indirect costs due to work loss, caregiver time and disability

Inhibikase

PAH: Patient and Treatment Journey

ERS=European Respiratory Society, ESC=European Society of Cardiology; WHO=World Health Organization; 6MWD= 6 Minute Walk Distance Test; NT-ProBNP= Biomarker of cardiac strain; NO = Nitric Oxide; * Riociguat is a soluble guanylate cyclase stimulator (sGC)

\$7.6B Market Driven by Vasodilators Which Don't Treat Underlying Causes of PAH

Novel antiproliferative agents with disease modifying properties expected to revolutionize treatment

IKT-001 has the potential to be the first oral anti-proliferative agent for the treatment of PAH

Inhibikase Therapeutics

2024 annual reports from Janssen, United Therapeutics, Bayer, and Merck

Our Solution: An Oral Pro-Drug of Imatinib Optimized for PAH

Engineered to realize imatinib's best-in-class efficacy potential in PAH

Gleevec (Imatinib)

IKT-001 (Imatinib Pro-Drug)

U NOVARTIS

History

First Approved in 2001; 25 years of real-world experience Indicated for: Leukemia, Soft Tissue Sarcoma, Myelodysplastic Syndromes, Mastocytosis and GIST IKT-001 is a novel pro-drug of imatinib designed for better GI tolerability allowing optimal efficacy

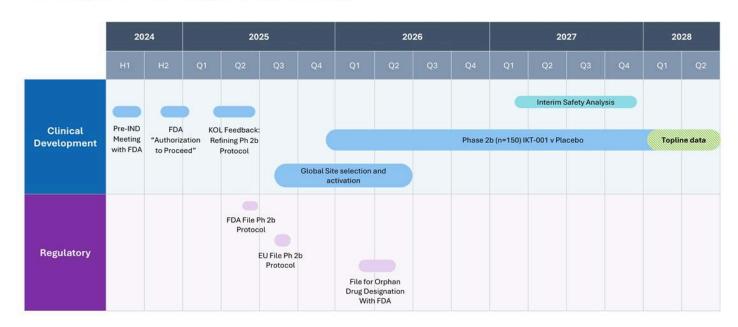

PAH Data

Best-in-class improvements in PVR and 6MWD in Phase 2 & 3 Greatest efficacy at 400mg but not clinically tolerated Contemporary study supports 400mg efficacy/tolerability findings

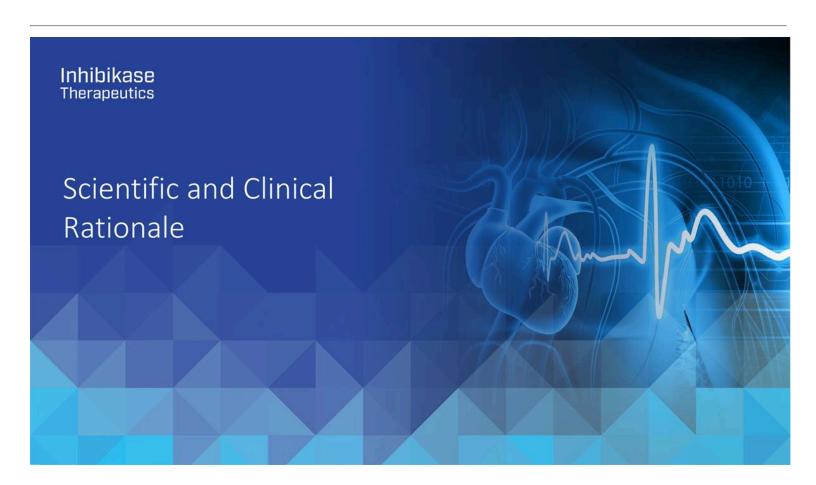

Potential to be the first and only once-daily oral anti-proliferative tyrosine kinase inhibitor (TKI) for PAH

Inhibikase Therapeutics PVR = Pulmonary Vascular Resistance: 6MWD= 6 Minute Walk Distance test: GI = Gastrointestinal: GIST = Gastrointestinal Stromal Tumor

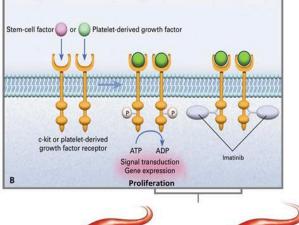

Development and Regulatory Timeline

Inhibikase Therapeutics

Imatinib Mechanism of Action in PAH Targets the Underlying Cause of PAH

Pulmonary vasculature with

aberrant cell proliferation

Adventitia
VSMCs
Internal elastic lamina
Microfibroblasts and
estracellular matrix
(neointima)
Endothelium

Overactive kinases implicated in aberrant cell proliferation and migration in the pulmonary vasculature

Imatinib inhibits the tyrosine kinase activity of PDGFR and c-kit, blocking cell signaling that drives vascular remodeling

Inhibikase Therapeutics

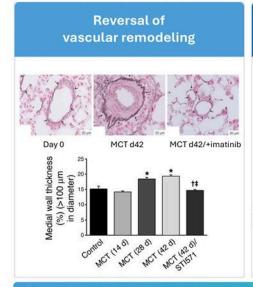

CONFIDENTIAL

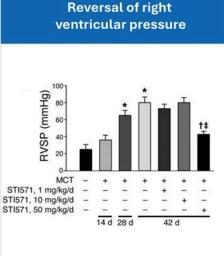

Normal pulmonary

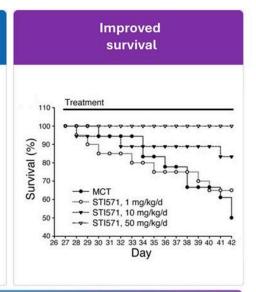

vasculature

Modified from Savage and Antman, 2005 and Barst, R J Clin Invest 2005 12

Imatinib Demonstrated Reversal of PAH in Standard Animal Model

Imatinib reverses pulmonary vascular remodeling, right ventricular pressure / remodeling and improves survival

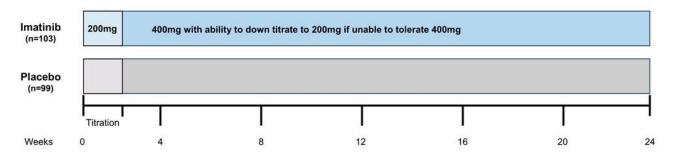

STIS71 = imatinib; MCT = monocrotaline
*P < 0.05 versus control; *P < 0.05 versus MCT at day 28 or hypoxia at day 21; *P < 0.05 versus MCT at day 42 or hypoxia at day 35.

Inhibikase

Schermuly et al., JCI 2005

IMPRES - Imatinib Phase 3 Study

Randomized, double blind, placebo controlled study to assess the efficacy, safety and tolerability of 400mg imatinib once daily (n=202)

Primary Endpoint

Change in 6MWD at 24 weeks

Secondary Endpoints

- · Changes in hemodynamics (PVR, CO, mPAP, RAP) at 24 weeks
- Time to clinical worsening

Key Inclusion Criteria

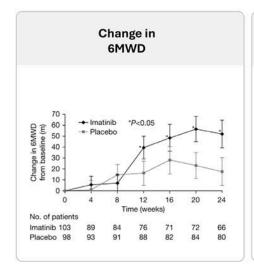

- · Functional Class II-IV
- · 2 or more background PAH therapies
- PVR ≥ 800 dynes.s.cm⁻⁵
- 6MWD ≥150 meters and ≤ 450meters

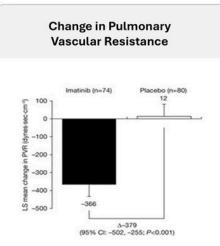

14

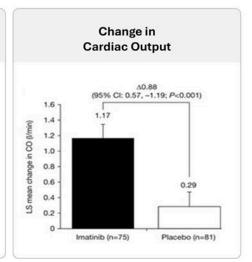

Inhibikase Therapeutics

Phase 3 IMPRES: Statistically Significant Improvement in Function & Hemodynamics

32-meter improvement in 6WMD and 32% reduction in PVR at week 24

Phase 3 IMPRES study hit its primary endpoint along with key clinically relevant secondary endpoints

Inhibikase Therapeutics

PVR = Pulmonary Vascular Resistance; 6MWD= 6 Minute Walk Distance test

Hoeper et al; Circulation 2013

Phase 3 IMPRES: 3 of the Top 5 AEs were GI Related

Majority of patients were unable to maintain 400 mg target dose of imatinib

	Imatinib n=103 (%)	Placebo n=98 (%)
Adverse Events	100 (97)	94 (96)
Nausea	57 (55)	23 (24)
Peripheral edema	45 (44)	20 (20)
Diarrhea	36 (35)	19 (19)
Vomiting	31 (30)	10 (10)
Periorbital edema	30 (29)	7 (7)

- The AE profile in IMPRES was similar to the established AE profile of imatinib in other indications
- Poor tolerance prevented most patients from maintaining the target dose of 400 mg of imatinib

Phase 3 IMPRES hit its primary endpoint DESPITE only 48/103 participants maintaining 400mg dose for at least half of the treatment period

IKT-001 is a novel pro-drug of imatinib designed for better GI tolerability allowing optimal efficacy

Inhibikase Therapeutics

AE = Adverse event: GI = Gastrointestinal

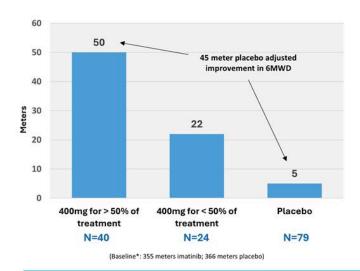

Hoeper et al; Circulation 2013

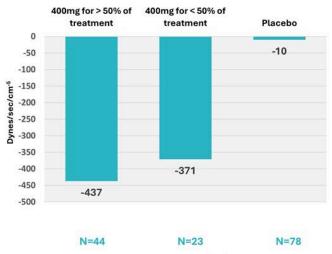

IMPRES: Efficacy Impacted by Tolerability of 400mg Per Day

Patients able to sustain 400mg dose showed greater improvements in 6MWD and PVR

Changes in 6MWD at Week 24

Changes in PVR at Week 24

(Baseline*: 1202 dynes/sec/cm⁻⁵ imatininb; 1181 dynes/sec/cm⁻⁵ placebo)

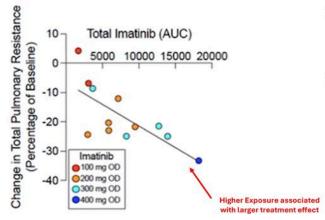

Inhibikase Therapeutics

^{*} Baseline data is not available for the sub-population of patients on 400mg of imatinib for > 50% of treatment so baseline data above reflects entire study population. PVR= Pulmonary vascular resistance; 6MWD = 6-minute walk distance

Contemporary Study of Imatinib Supports 400mg Dose for Best Efficacy

Higher Exposure = Larger Improvement

Doses over 200mg per day were poorly tolerated

More than 50% of subjects who completed the study were on 200mg per day or less

One-third of patients who started the study at either 300mg or 400mg had dose-limiting toxicity at Week 4 and subsequent dose reduction

Only 5 patients completed the study at 300mg or 400mg per day

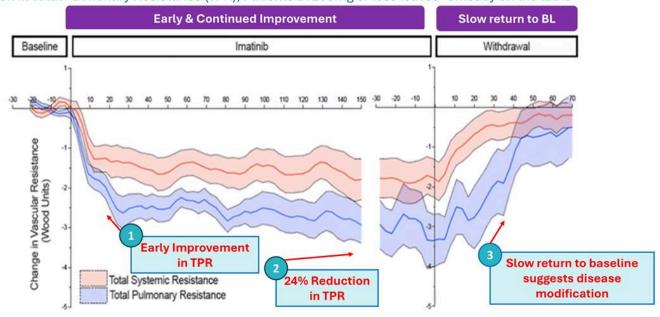

Percentage change in total pulmonary resistance from baseline at 60 days in relation to plasma level (area under curve in $\mu g^*h/L$) of imatinib at steady state (red-100md QD, orange-200mgQD, cyan-300mg QD, blue-400mg QD)

Inhibikase Therapeutics

* Rothman et al., AJRCCM 2025. 17 patient open-label study. Patients were implanted with the CardioMEMS HF System which is a small, wireless sensor implanted in the pulmonary artery to monitor pulmonary artery pressure. Patients remained in the study for up to 24 weeks.

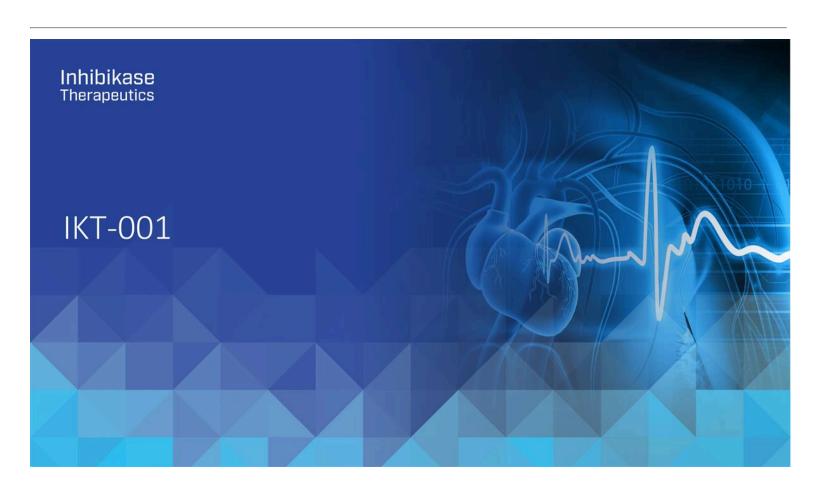

Rapid and Sustained Hemodynamic Effect & Disease Modification of Imatinib in PAH

24% reduction in Total Pulmonary Resistance (TPR); Patients at 200mg or less leaves "efficacy on the table"

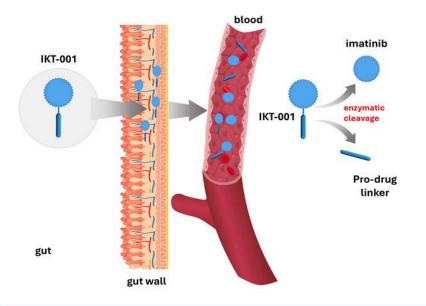

Inhibikase Therapeutics

* Rothman et al., AJRCCM 2025. 17 patient open-label study. Patients were implanted with the CardioMEMS HF System which is a small, wireless sensor implanted in the pulmonary artery to monitor pulmonary artery pressure. Patients remained in the study for up to 24 weeks.

IKT-001 Minimizes GI Imatinib Exposure to Drive Increased Tolerability

28 Day non-human primate study documents improved GI tolerability

>2.5x Improvement in GI Tolerability

Dose Associated with GI Toxicity

Imatinib: 75 mg per kg per day

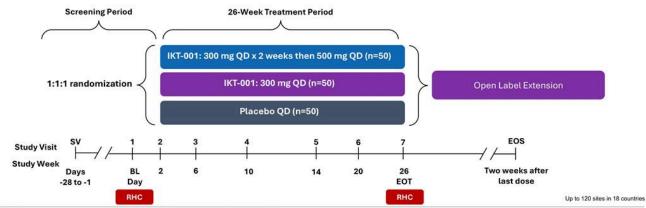

IKT-001: 200 mg per kg per day

Inhibikase Therapeutics

GI = gastrointestinal

IKT-001-201: A Phase 2b Study of IKT-001 in PAH

Randomized double-blind, placebo-controlled study to evaluate efficacy and safety of once daily IKT-001

Primary Endpoints:

PVR at week 26, change from baseline

Safety and tolerability

Secondary Endpoints:

6MWD

WHO Functional Class Pharmacokinetics Inclusion / Stratification:

WHO Group 1 PAH with New York Heart Association Functional Class II / III symptoms

Baseline Right Heart Catheter performed during screening period:

- PVR of ≥400 dynes/sec/cm⁻⁵; PCWP ≤15 mmHg; mPAP >20 mmHg
- PVR enrichment criteria to ensure population baseline PVR >700 dynes/sec/cm⁻⁵

6MWD ≥100 and ≤500 meters

Previous sotatercept allowed if discontinued 6 months prior to screening and no history of serious bleeding events

Stratification by number of background therapies and ERS/ESC Risk Score

Inhibikase Therapeutics

PVR = pulmonary vascular resistance; 6MWD = 6-minute walk distance; RHC = right heart catheter; PCWP = pulmonary capillary wedge pressure; mPAP = mean pulmonary arterial pressure; BL = baseline; SV = screening visit; EOT = end of treatment; EOS = end of study

Inhibikase and IKT-001: Pulmonary Arterial Hypertension (PAH)

Major unmet need with high mortality, poor QoL and high cost

- PAH is a rare, progressive and life-threatening disease with significant unmet need
- ~30% 5-year mortality⁽¹⁾, reduced quality of life and high economic burden
- \$7.6 Billion market with limited treatments that address the underlying etiology

Imatinib has proven efficacy in Phase 3 in PAH

- Imatinib is an anti-proliferative TKI with potential best-in-class improvements in PVR and 6MWD (45 meters*) based on Phase 3 IMPRES and Phase 2 studies
- Imatinib hit primary efficacy endpoints in IMPRES but was not well tolerated at 400mg

Potential to be the 1st oral anti-proliferative agent

- IKT-001 is a pro-drug engineered to realize the potential of imatinib in PAH
